Profile

I'm a front-end developer with experience in HTML5, CSS3, JavaScript, WordPress, usability and cross-browser compatibility.

I've created a wide range of websites and small webapps working for various companies, as well as a freelance developer.

While I consider myself a front-end only developer, I have some experience with PHP (WordPress theme and plugin development) and MySQL, as well as setting up servers.

I'm also quite competent with Photoshop and Sketch, but I'm not a graphics designer, so you shouldn't count on me for creating your company logo.

These are some of my skills and qualities:

- HTML5, CSS3 and preprocessors such as LESS and SASS.
- Experience with CSS frameworks such as Bootstrap, Foundation, Bulma, Tychons and UIKit.
- JavaScript (ES5 and ES6) with and without jQuery. Some experience with Vue and React.
- Wordpress theme and plugging building form scratch, therefore, PHP, but nnot as a backend developer.
- Template engines such as Pug, EJS and Twig.
- Webpack and Gulp
- Versioning tools Git/VN.
- Clean code, Usability and Accessibility.
- Cross-browser, mobile-first websites and webapps.
